

GCF= _____

Rewrite each expression using the GCF:

a. $3x^2 + 12x - 27$

b. $4y^3 - 10y^2$

c. $12xy^3 + 15x^3y^2$

d. $5m^2 - 10m$

Generic Rectangle

a. Fill in the missing dimensions.

4x	10
$2x^2$	5x

b. Write area as a sum and a product

c. What do the diagonals have in common?

Polynomials

Write an example of a:

monomialbinomialtrinomial**Quadratic Expressions**

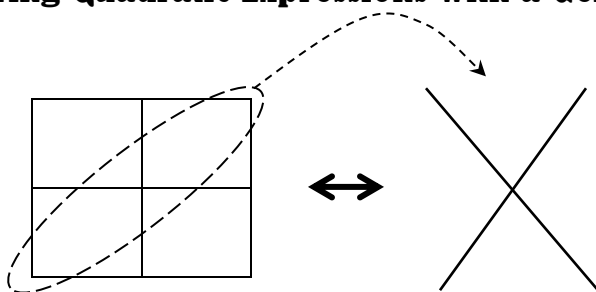

a. Definition of a quadratic:

b. Examples:

*(factored form)*quadratic written as a sum = quadratic written as a product

$x^2 + 5x + 6 =$

$2x^2 + 8 =$

Factoring Quadratic Expressions with a Generic Rectangle and Diamond ProblemGiven: Factor $2x^2 - 7x + 6$ Therefore... $2x^2 - 7x + 6 = (\quad)(\quad)$ **Factoring Special Cases:****Difference of Squares**

("difference" refers to the mathematical operation of _____)

a. $x^2 - 4 = (\quad + \quad)(\quad - \quad)$

b. $9x^2 - 4 = (\quad)(\quad)$

c. $x^2 - y^2 = (\quad)(\quad)$

Greatest Common Factor (GCF)

d. $x^2 - 4x = \underline{\hspace{1cm}} (\quad - \quad)$

e. $8x^2 + 12x = \underline{\hspace{1cm}} (\quad)$

f. $10x - 40 = \underline{\hspace{1cm}} (\quad)$

Factoring Completely:

a. $9x^2 + 15x + 6 = \underline{\hspace{1cm}} (\hspace{1cm})$
 $= \underline{\hspace{1cm}} (\hspace{1cm} + \hspace{1cm}) (\hspace{1cm} + \hspace{1cm})$

b. $2x^2 - 12x + 18 = \underline{\hspace{1cm}} (\hspace{1cm})$
 $= \underline{\hspace{1cm}} (\hspace{1cm} - \hspace{1cm}) (\hspace{1cm} - \hspace{1cm})$ OR $\underline{\hspace{1cm}} (\hspace{1cm})^2$

c. $25x^3 + 15x^2 - 10x =$

Factoring Quadratics by applying the FOIL Method

F =

Examples: a. $3x^2 + 5x - 2 = (\hspace{1cm}) (\hspace{1cm})$

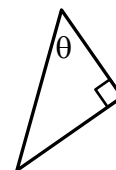

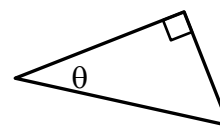

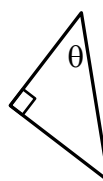

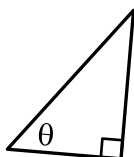

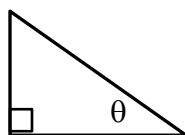

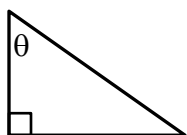

O =

I =

b. $x^2 - 12x + 36 = (\hspace{1cm}) (\hspace{1cm})$ OR $(\hspace{1cm})^2$

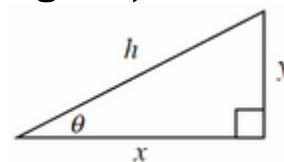

L =

c. $5x^2 + 12x + 4 = (\hspace{1cm}) (\hspace{1cm})$

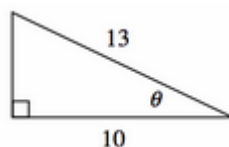

Identifying the Hypotenuse and Opposite/Adjacent Legs of a Right Triangle**Trig Ratios: Sine, Cosine, and Tangent (given an angle, find a missing side)**

$\sin \theta = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

$\tan \theta = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

$\cos \theta = \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$

Soh Cah Toa**Inverse Trigonometry: Use \sin^{-1} , \cos^{-1} , \tan^{-1} to “undo” the three trig functions. (given side ratio, find missing angle)**

$\cos \theta = \underline{\hspace{2cm}}$

$\theta = \cos^{-1}(\underline{\hspace{1cm}})$

$\theta \approx$

Note: Be sure calculator mode is set to degrees!
